

## Unleashing the Power of Your Big Data

Rivet Logic serves as a trusted partner on your MongoDB journey, empowering your business to be more agile and scalable, while enabling new types of applications and improving customer experiences.

We offer two “MongoDB Starter” packages to help you get the most out of your data.

### Kick Start Package

*Good if you have: no MongoDB experience, want to get something quick up and running for evaluation*

#### Tasks and Deliverables:

- Meet with you to discuss your project requirements and other high level information
- Suggest overall deployment, replica set and shard configurations
- Propose data models and index setups
- Install and configure MongoDB in your environment according to agreed-upon configurations and models
- Recommend what you will need to achieve your longer term storage and performance needs
- Recommend best practices for backup, disaster recovery procedures, data availability and failover procedures
- Document all installation and configuration details, along with all recommendations

### Architecture Optimization Package

*Good if you have: a running MongoDB install, need it to perform/scale/follow best practices*

#### Tasks and Deliverables:

- Meet with you to discuss your project requirements and other high level information
- Gather all existing MongoDB environment and setup details
- Document and evaluate overall deployment, replica set and shard configurations
- Audit all data models and index setups
- Assess data reliability and risk
- Check for exceptions and performance anomalies
- Identify usage patterns and suggest improvements
- Evaluate backup, restore and disaster recovery procedures
- Assess data availability and failover procedures
- Document the results of our analysis and our recommendations
- Recommend best practices for backup, disaster recovery procedures, data availability and failover procedures
